

## Criterion SDCloud® Design Center

SaaS environment purpose-built for collaborative virtual network design, validation & automation

### Virtual network design, validation & automation at the click of a button

Service Providers and enterprises are rapidly transforming their network and service infrastructure. The transformation is fueled by an ever-growing adoption of cloud services, a rapid shift to cloud-native application architectures, and a full-embrace of distributed workforces.

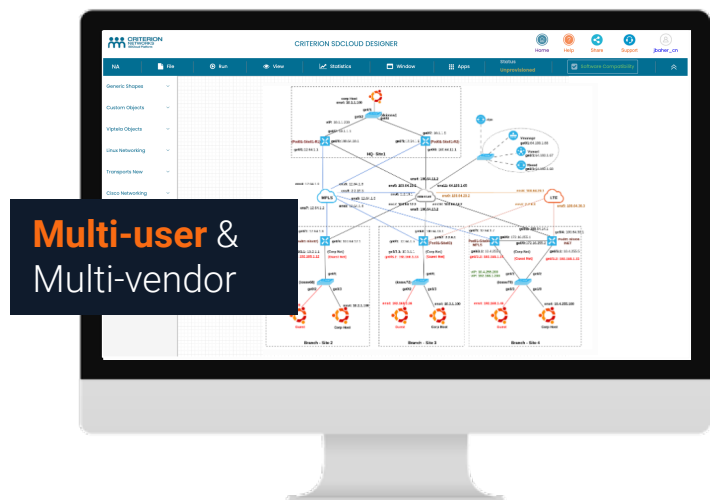

For many, this is new ground. To get there, network architects, engineers, and operations teams need environments to design, test, and validate new networks and technologies in advance of rollouts and upgrades. This is exactly what Criterion SDCloud® Design Center provides.

### All-in-one platform for Day 0 designs, Day 1 deployments & Day 2 operations

At the heart of Criterion SDCloud® Design Center is a multi-user virtual network lab platform coupled with an intuitive drag-and-drop canvas for rapid Day 0 design and validation exercises, automated Day 1 deployments, and assured Day 2 operations. The platform allows architects and engineers to collaboratively design, validate, deploy and operate new network technologies inside a virtual sandbox environment prior to deploying to production environments. The platform is vendor agnostic and supports a wide-range of technologies including SD-WAN, SASE, Edge & Multi-Cloud Networking, Container Network, and 5G.

Criterion SDCloud® Design Center generates fully operational virtual infrastructure that can be connected to physical labs, product network elements, and public cloud resources. With the platform, organizations can preserve existing investments while introducing new capabilities and safeguards to reduce business interruptions by testing and gaining confidence with new networking and security technologies, policies, and releases in advance of production rollouts.

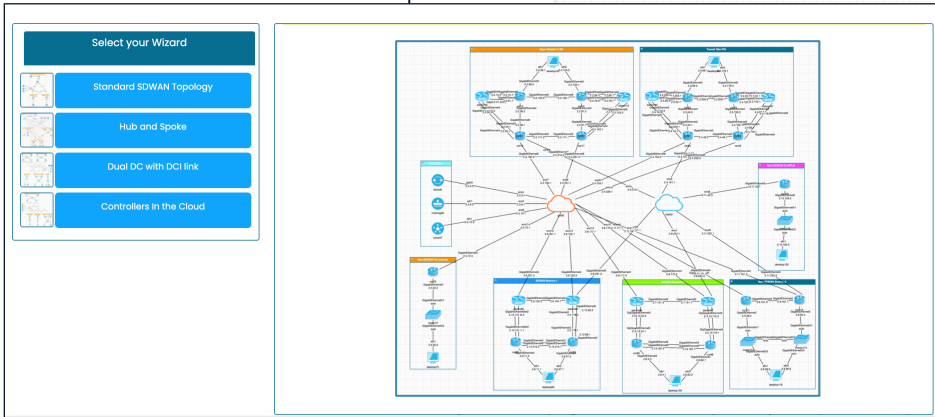

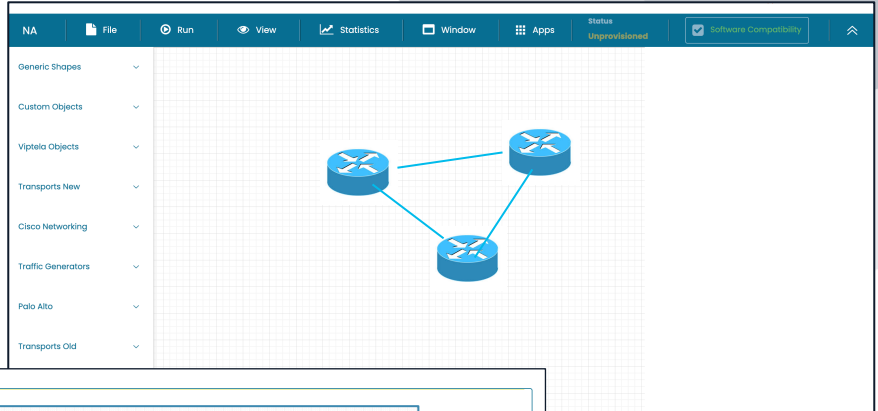

- **VIRTUAL NETWORK LAB & CANVAS**  
with WAN impairment, traffic generator & end-host tools
- **ONBOARD COLLABORATION TOOLS**  
to facilitate group design exercises
- **BUILT-IN AUTOMATION**  
for error-free Day 1 deployments & Day 2 operations

Criterion SDCloud® Design Center

## Drag-&-drop canvas

Intuitive design canvas lets you create complex network topologies & connect them to physical labs, product networks & cloud resources.

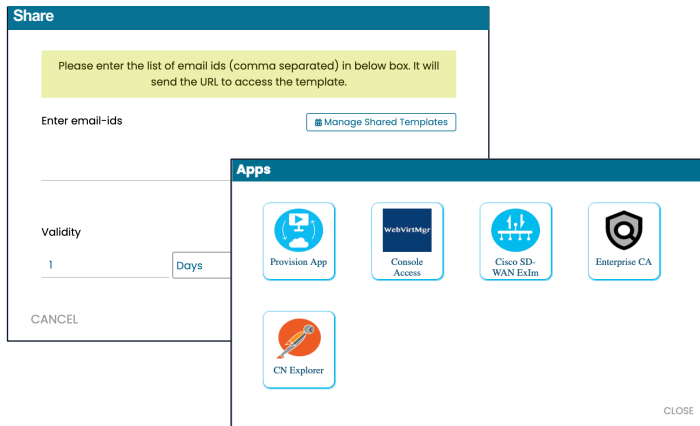

## Multi-vendor library

Take advantage of the built-in multi-vendor design for rapid topology creation & sandboxing exercises

## Built-in collaboration

Use the built-in collaboration tools to share designs & perform group design & validation exercises

## Onboard app store

Take advantage of the on-board app store for monitoring, performance, & automation apps

## Let's start transforming today!

The time is now for network transformation. See for yourself just how easy Criterion SDCloud® Design Center can make it. What are you waiting for? Let's take the next steps together. Start your free trial today!

### About

We're a cloud company providing hosted design, experience and learning services to accelerate service provider and enterprise network transformation. Today, our Criterion SDCloud® platform services customers globally transforming networks with leading technologies including SD-WAN, SASE, Container Networking, Edge Computing and 5G.
